

Amendments To The Claims

1.(currently amended) A method for sensing data from a sheet of print media, the method comprising:

sensing a media marking on a face of a sheet of print media if the media marking is imprinted on the face of the sheet and sensing a media marking on an edge independent of whether a media marking is imprinted on an edge or a face of a sheet of print media if the media marking is imprinted on the edge of the sheet, sensing the media marking, the media marking comprising media parameter information that corresponds to the sheet of print media; and

configuring an imaging device based on the media parameter information to form an image on the sheet of print media ~~retrieving the media parameter information from the media marking.~~

2. (original) A method as recited in claim 1, wherein the media marking is an ink-bled media marking.

3-4. (canceled)

5. (currently amended) A method as recited in claim 1, further comprising ~~wherein after receiving the media parameter information, the method further comprises:~~
determining whether to pull the sheet of print media from a particular media supply bin based on the media parameter information.

6. (currently amended) A method as recited in claim 1, further comprising ~~wherein after receiving the media parameter information, the method further comprises:~~
determining if an appropriate print media is available in the an imaging device to perform a particular imaging job based on the media parameter information.

17. (currently amended) A computer-readable medium comprising computer-executable instructions for sensing data from a sheet of print media, the computer-executable instructions comprising instructions for:

sensing a media marking on a face of a sheet of print media if the media marking is imprinted on the face of the sheet and sensing a media marking on an edge independent of whether a media marking is imprinted on an edge or a face of a sheet of print media if the media marking is imprinted on the edge of the sheet, sensing the media marking, the media marking comprising media parameter information that corresponds to the sheet of print media; and

configuring an imaging device based on the media parameter information to form an image on the sheet of print media ~~retrieving the media parameter information from the media marking.~~

8. (original) A computer-readable medium as recited in claim 7, wherein the media marking is an ink-bled media marking.

9-10. (canceled)

11. (currently amended) A computer-readable medium as recited in claim 7, wherein ~~after the instructions for receiving the media parameter information, the~~ computer-executable instructions further comprise instructions for:

determining whether to pull the sheet of print media from a particular one bin of a plurality of media supply bins based on the media parameter information.

12. (currently amended) A computer-readable medium as recited in claim 7, wherein ~~after the instructions for receiving the media parameter information, the~~ computer-executable instructions further comprise instructions for:

determining if an appropriate print media is available in the an imaging device to perform a particular imaging job based on the media parameter information.

13. (currently amended) An imaging device comprising:
a memory comprising computer-executable instructions for sensing data from a sheet of print media, ~~the device~~; and
a processor that is operatively coupled to the memory, the processor being configured to fetch and execute the computer-executable instructions from the memory, the computer-executable instructions comprising instructions for:

sensing a media marking on a face of a sheet of print media if the media marking is imprinted on the face of the sheet and sensing a media marking on an edge independent of whether a media marking is imprinted on an edge or a face of a sheet of print media if the media marking is imprinted on the edge of the sheet, sensing the media marking, the media marking comprising media parameter information that corresponds to the sheet of print media; and

configuring the imaging device based on the media parameter information to form an image on the sheet of print media ~~retrieving the media parameter information from the media marking.~~

14. (original) An imaging device as recited in claim 13, wherein the media marking is an ink-bled media marking.

15-16. (canceled)

17. (currently amended) An imaging device as recited in claim 13, wherein ~~after the instructions for receiving the media parameter information,~~ the computer-executable instructions further comprise instructions for:

determining whether to pull the sheet of print media from a particular one bin of a plurality of media supply bins based on the media parameter information.

18. (currently amended) An imaging device as recited in claim 13, wherein ~~after the instructions for receiving the media parameter information,~~ the computer-executable instructions further comprise instructions for:

determining if an appropriate print media is available in the an imaging device to

BEST AVAILABLE COPY

perform a particular imaging job based on the media parameter information.
